

# GE1 / GE2 GEAR LIMIT SWITCH

The gear limit switch GE1 / GE2 is a rugged switching device according IEC/EN 60947-5-1 for hoisting applications. The modular micro changeover contacts with positive opening operation. The type GE1 includes a double cam disk conjointly lockable  
The type GE2 includes a double cam disk individually lockable

Mechanical life 10 million (operating cycles)

Permissible ambient temperature Operation -40° C to +60° C

Storage -50° C to +80° C

Degree of protection front IP 65 IEC / IEN 60529

Contact complement 2A 250V AC 15 or 1A 24V DC 13

The device is programmed by means of stepless adjustment of double cam disks, which can be provided from 18° to 192° contact disks

Wire-wound potentiometer linear resistance 1k, 2k, 5k, 10k
